

Lab Experiment 07: Machine Learning Inference

Objectives

- Getting introduced to machine learning inference using Python-Jupyter notebook and ESP32.

Machine Learning Inference on Cloud

- Project Repository
Link: https://drive.google.com/drive/folders/1GXuOmYWc0ecINhZPBi2OLO8JMzR27Jmo?usp=share_link
- Make sure that the following requirements are met:
Link: https://drive.google.com/file/d/1lVGL_RUsszEYFGQHUtDLP86TeUJaQUup/view?usp=share_link
- You are required to run the following sketch on ESP32 for the voice acquisition:
Link: https://drive.google.com/file/d/1eOf9-q3yj-ixQDCcyqdr6WKbx5cjDiz/view?usp=share_link
- You are required to run the following interactive python notebook using Jupyter:
Link: https://drive.google.com/file/d/1F1aSL8ba9YVw9nKnTgFfs66NkB8JkTiL/view?usp=share_link
Note: We are using Jupyter notebook and not google colab notebooks since Jupyter is running locally and can sense the local hardware connections to ESP32.

Delivery Policy

- Each group must send the inference python notebook for first part after successful run of all cells.
- You should submit a report showing your schematic diagram and the challenges you faced (if any).
- You should cite any additional resources you used.
- Further details for the submission instructions will be posted later on MS Teams.

Good Luck
